## Advanced usage

---

### Advanced

---

AsciiDoc supports many advanced features such as:

- Creating a graphviz image
- Adding callouts
- Macros to include system commands
- Loading a CSV file into a table
- Conditional inclusion macros
- Embedding images in data-uri for XHTML output

### Embed images in data-uri

This is built-in to AsciiDoc and enables you to convert your PNG images into base64 encodings that are included in the HTML output file. When you use this feature, the image data is included in the asciidoc file and avoids having to distribute the images files. For more information read the AsciiDoc documentation for instructions using `:data-uri:`.

### Graphviz charts

This requires that you install Graphviz on the computer that generates output. If you see the error message "IndexError: list index out of range" then Graphviz cannot be found. In case of such an error check that Graphviz is on your environment "PATH" variable. Depending on how Graphviz was installed, you also may need to run "dot -c" (with installer's privileges) to register the plugins.

## Callouts

Callouts functionality is built into AsciiDoc. Read the AsciiDoc documentation for instructions.

### MS-DOS directory listing.

```
-----
10/17/97  9:04      <DIR>   bin
10/16/97  14:11     <DIR>   DOS           ❶
10/16/97  14:40     <DIR>   Program Files
10/16/97  14:46     <DIR>   TEMP
10/17/97  9:04      <DIR>   tmp
10/16/97  14:37     <DIR>   WINNT

 2/13/94   6:21           9,349 WINA20.386  ❸
-----
```

- ❶ This directory holds MS-DOS.
- ❷ System startup code for DOS.
- ❸ Some sort of Windows 3.1 hack.

## Macros

Run script on your system and incorporate that into the documentation. Using `dir` in a Windows environment. Change to a different command to match your OS.

```
Volume in drive C is BOOTC
Volume Serial Number is 1F34-7217

Directory of C:\asciidoc

Directory of C:\asciidoc
```

```
01/06/2021 12:41 AM      8,053 sample_conversions.asciidoc
      1 File(s)          8,053 bytes
      0 Dir(s) 128,321,863,680 bytes free
```

## External scripts

For example, run an external script such as a pychart and then load the resulting image.

```
<svg baseProfile="full" height="200" version="1.1" width="200" xmlns="http://
www.w3.org/2000/svg" xmlns:ev="http://www.w3.org/2001/xml-events" xmlns:xlink="http://

cx="100" cy="50" fill="red" rx="50" ry="25" /></a></svg>
```
